Low-Dose CT Lung Cancer Screening

Penn Highlands Healthcare

Early detection of lung
cancer can save your life.

Low-Dose CT Lung Cancer Screening Program

Penn Highlands Healthcare is pleased to be the first healthcare facility in this region to offer CT Lung Cancer Screening.

Lung cancer is the number one cancer killer in the United States causing more deaths than breast, colon, and prostate cancer combined. With CT lung screening, the goal is to detect the lung cancer early in the course before it has caused the symptoms.

BENEFITS OF CT LUNG SCREENING

In high-risk population, CT lung screening reduces the chance of lung cancer related death by up to 20 percent. The lung cancer screening is done by using low-dose CT scan, which uses a very small dose of radiation to take pictures of the lungs. The dose of radiation is significantly lower than a standard chest CT scan.

ELIGIBILITY FOR CT LUNG CANCER SCREENING

To be a candidate for CT lung screening, the individual must meet one of the following criteria:

55 to 80 years old, with at least a 30 pack-year smoking history who currently smoke or quit less than 15 years ago. One pack-year is equal to smoking 20 cigarettes, or one pack, everyday for one year.

50 years or older with at least a 20 pack-year smoking history and one or more of these risk factors: long-term exposure to asbestos, asbestos-related lung disease, chronic obstructive pulmonary disease (COPD), pulmonary fibrosis, family history (parent, sibling or child) of lung cancer, long-term exposure to silica, cadmium, arsenic, beryllium, chromium, diesel fumes, nickel, coal smoke and soot.

If your insurance provider requires a prior authorization for this screening, one will be done for you. If your insurance provider denies coverage, you will be responsible for the out-of-pocket expense of \$99.

Patients or physician offices may call the Lung Center to schedule a Low-dose CT Lung Cancer Screening at 814-375-3770 from 9:00 AM to 3:00 PM, Monday through Friday.

The CT scans are conducted at all eight Penn Highlands hospitals.
