Healthcare

More than 200,000 women are diagnosed with breast cancer each year in the U.S. The importance of early detection cannot be stressed enough. Size matters, and smaller tumors are less invasive and more treatable. Unfortunately, they are also harder to detect on self breast exams, which is why it is important for women to have regular, yearly mammograms.

PENN HIGHLANDS HEALTHCARE IS COMMITTED TO THE BATTLE AGAINST BREAST CANCER. Tomosynthesis – more commonly called 3-D mammography – is now available. Using the same X-ray technology as traditional 2-D mammography, the procedure feels essentially the same for the patient. The difference is the image clarity for the radiologist who reads the mammogram. Whereas 2-D mammograms give views only from the front and side of the breast, 3-D mammograms provide images of the breast in “slices” from many different angles.

Two-dimensional mammography is still a gold standard and is indicated for routine screenings. It is an excellent tool for detecting breast abnormalities.

Two-dimensional mammography is still a gold standard and is indicated for routine screenings. It is an excellent tool for detecting breast abnormalities.

One in eight women will be diagnosed with invasive breast cancer in her lifetime.

To schedule 2-D mammograms:

- PH Brookville 814-849-1880
- PH Clearfield 814-768-2276
- PH DuBois 814-375-4636
